SENSOR IN ALARM

1. Press the **Status** button 
2. Go to the location of the sensor in alarm
3. Stop the water leak and dry the sensor
4. Press on the **Reset** button 
5. Press on the **Open Valve** button 

IN CASE OF POWER OUTAGE

1. Go to the valve location
2. Find the white roulette and lift it
3. Turn the roulette clockwise until the valve is in the open position (Do not push back the roulette)
If the valve start rotating by itself, let it complete it's rotation and redo the step 3
4. Once the power outage is done, push back the roulette to it's original position to put the valve back in in operation.
